

OSINT sessions

11.00 – 12.00 **Transforming Investigations with Maltego!** – Ben Toner, Key account manager

Open Source Intelligence is a field, which is gaining more and more relevance for any kind of criminal investigation. Maltego is the market leader in holistic OSINT investigations. In this talk, Maltego will present real life investigations to show the power of OSINT for any kind of criminal investigation you might encounter. Ben Toner is the go-to person at Maltego for Enterprise organizations, Government and Law Enforcement Agencies for information security solutions, investigation demonstrations, and technical deployment consultancy

13.00 – 14.00 **OSINT: Press Start to Play - Part 1** – Henri Beek, OSINT trainer DataExpert

OSINT and gaming have a lot in common. Both require quick reflexes, attention to detail, and a passion for finding hidden easter eggs. In gaming, you have a range of weapons and tools at your disposal to help you on your quest. In OSINT, your weapons are search engines, social media and/or gaming platforms, and public databases. You can use these to gather information on (cyber)criminals who are (mis)using gaming platforms or obtain more information on a victim. Just like in gaming, success in OSINT requires strategy. You must think if you want to use a silent approach or to zero rush your opponent to obtain data. OSINT and gaming may seem like two completely different things, but they share more similarities than you might think. This skills session is for people who are interested in taking on their first quest into investigating gaming platforms.

In this first part of the session, we will look into the different platforms and how to gain a quick intel position using a custom search engine and expand on how to add this to your OSINT toolkit.

14.00 – 15.00 **OSINT: Press Start to Play - Part 2** – Henri Beek, OSINT trainer DataExpert

In this second part of the session, we will look into one of the most popular platforms and how investigations can be done to gather more information.

15.30 – 16.30 **Case Study: Location Analysis & Open-Source Intelligence Uncover Leads & Hidden Connections** – Robert Wingelaar & Anna Merian, Cobwebs Technologies

*As the need for actionable intelligence increases, intelligence agencies need an end-to-end Open-Source Intelligence (OSINT) solution to ensure timely operational results. This type of AI-powered automated solution ensures that analysts are uncovering hidden connections and leads quickly, reducing manual searches and enhancing analytical insights. In this session we will discuss the current state of web intelligence and location intelligence, using several use cases to highlight growing trends in this field. Attendees will see case studies of how location intelligence can enhance investigations, uncovering hidden connections, while providing investigators with additional or new leads. This session will include live product demonstration. **(LAW ENFORCEMENT ONLY)***
